

# PLASTIC FANTASTIC

Innovative plastic products offer new possibilities

By **Rachel Smith**

New innovations challenge the way we see the world and expand the notion of what is possible. For Cebelio Holdings this means pushing the boundaries in terms of the plastic products they source and the fabrication techniques they offer.

At the Canterbury Home Show on Friday 14 to Sunday 16 October, the company will be showcasing their alternative to traditional decking, a composite eco-decking by Futurewood. "Our eco-decking is quite special in its composition," says Jason Roberts, co-owner of Cebelio Holdings alongside Glenn Eathorne. The Australian designed decking is made from a mix of recycled products – a third each of HDPE, namely recycled power cables and milk containers, Black Poplar hard wood remnants from furniture making, and rice husks. The

eco-decking is noted for its simple installation, easy care maintenance and longevity. A newly installed display area gives their customers the opportunity to see options in terms of colours and layout, as well as a variety of profiles that have been used for the likes of seating in the EA Networks Centre in Ashburton. Roberts and Eathorne have five decades of experience in the industry between them. From their expansive workshop in Woolston, they source, store, convert and distribute plastic products, with their customers ranging

"Over the years we have built up a range of quality products and great relationships with local and international suppliers."

from builders and architects through to print, signage, industrial and commercial building industries, as well as the general public. Their products can be as simple as a standard perspex (acrylic) brochure holder, expertly routed lettering from Constructa board, or as complicated as a bespoke 1500mm diameter domed cheese fridge that put their problem solving skills to the test. "We can fabricate to whatever our clients need," says Eathorne, with specialist equipment to provide routing and laser services for the signage

and joinery markets. "We source and fabricate products for signage businesses which supply signs for major local industries – over the years we have built up a range of quality products and great relationships with local and international suppliers." Other products include Solar Shield polycarbonate roofing, Plexiglass acrylic retrofitted double glazing, acrylic sheet shower linings, and much much more. For more information, stop by Cebelio Holdings at 22 Tanner Street in Woolston, call 03 338 7050 or visit [www.cebelio.co.nz](http://www.cebelio.co.nz) and on Trade Me.

## COMPOSITE DECKING

- Environmentally friendly - Futurewood is produced from recycled HDPE plastic, discarded rice husk and wood fibre.
- Low maintenance - DOES NOT require painting, staining and does not leach nasty chemicals
- Carries a 15 year warrantee against splitting, splintering and colour fastness
- Supplied in long 5.4m lengths with a hidden fixing system giving a clean uniformed look
- Being 100% recycled, reduces the dependence on precious timber products
- Available locally in 4 natural colours
